

Does your Division contain some of the 1800 Practices who are able to send secure encrypted Doctor to Doctor communications via their existing Practice Software FOR FREE!

Simply by selecting the document from their Practice Software and hitting the "Print" button, these Practices can deliver electronic prescriptions, referral letters, correspondence and other documents directly into the patient record of the recipient's Clinical Manager.

You can do this TODAY with no changes needed at the recipient's end.

AllTalk AVP is an application with PKI signing using HeSA tokens on the desktop. It integrates with your existing AllTalk connection allowing Patient History exchange and

FULLY ELECTRONIC REFERRALS

There is no need to keep a paper copy for Medicare Claiming purposes

Documents and files, e.g. "Word" documents, .rtf and .pdf files, can also be securely delivered electronically

AVP is currently integrated with Medical Director 2 & 3 and directly supported with products such as Genie, Medical Wizard, ZedMed. It can be configured to work with virtually any Practice Software.

MacIntosh and Linux clients are also able to receive AllTalk messages.

Divisions of General Practice are encouraged to assist their members with configuring AVP for use with their existing AllTalk communication links via their Pathology & Radiology Service Providers, such as:

- ◆ St Vincent's Hospital, Melbourne
- ◆ Womens & Childrens Healthcare Network, Melbourne
- ◆ St John of God, Australia wide
- ◆ Symbion Health

In some cases, where there is a benefit (such as GP's sending electronic referrals to a Hospital's Specialist Clinic), the AllTalk Service Providers may even supply AVP free of charge.

Divisions may also find it beneficial to install their own AllTalk Servers for use by their members. **There are no messaging charges.**

Installation is simple via the Internet with personal telephone support.

Importantly, **PKI is "optional"** in AllTalk – it is not necessary for Members to have a HeSA token to send or receive secure messages. AllTalk will manage Signed Messages so they can also be accepted by members who do not have PKI certificates.

To download AllTalk, or for a personal discussion about this latest technology, please call Glen or Andrew on 03 5995 7880, or email glen@lrsupport.com.au.

We have been providing software for the health industry for over 17 years. LRS is proudly owned and operated in Australia. **For further information about AllTalk AVP please visit the "EHealth Messaging" section of our Web Site: www.lrsupport.com.au**
